

NIF

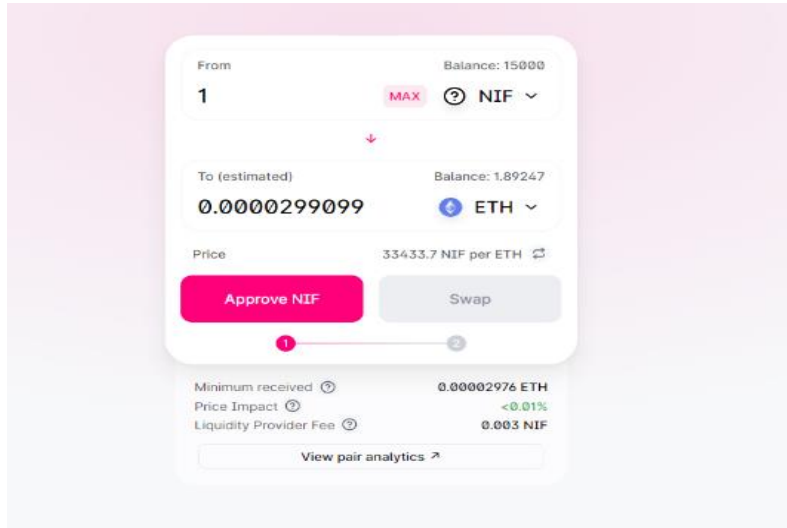

We are pleased to announce the opening of our beloved **unifty farm (NIF)**, we will start by explaining a brief tutorial on how to bring your **unifty to the farm** in simple steps and **fully guided**:

How to add and remove liquidity on uniswap

1. At the top of our interface you will see the link "Get \$NIF at Uniswap".

2. Once we are redirected to uniswap we will see an interface like the following:

As we see below there is an option "view pair analytics" we click:

We will see a page like the one below:

Select the option "+add liquidity".

3. Here we will see a menu very similar to when we do a swap in uniswap. The only difference is that we Will provide liquidity to the NIF-ETH pair.

In the upper part we will introduce the nifs that we are going to provide and below will come out the eth that we have to deposit automatically.

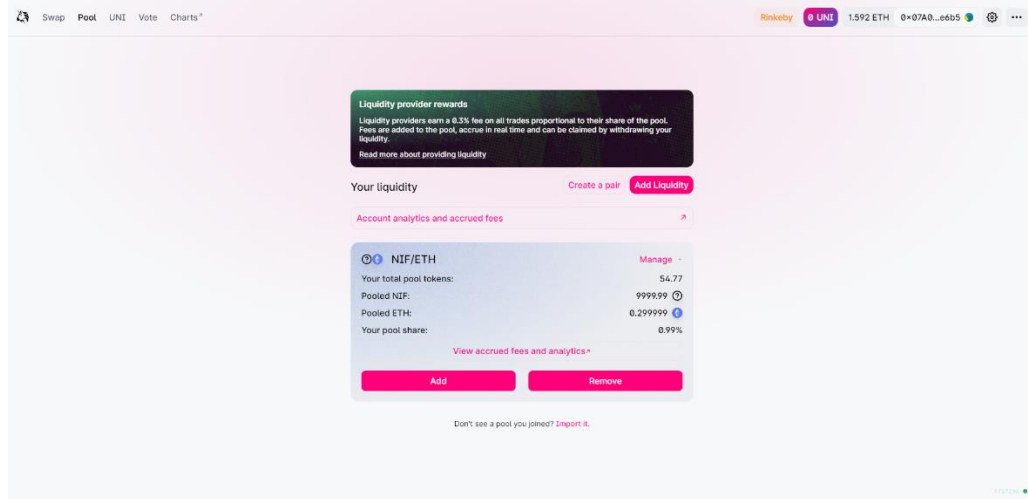

Later when you click on "Supply":

The screenshot shows the 'Add Liquidity' screen. At the top, there's a back arrow and a title 'Add Liquidity' with a help icon. Below this, there are two input sections. The first section is for NIF, with an input field containing '10000', a 'MAX' button, a help icon, and a dropdown menu showing 'NIF'. To the right, it says 'Balance: 15000'. The second section is for ETH, with an input field containing '0.3', a 'MAX' button, a help icon, and a dropdown menu showing 'ETH'. To the right, it says 'Balance: 1.89243'. Below these is a section titled 'Prices and pool share' containing three columns: '0.00003 ETH per NIF', '33333.3 NIF per ETH', and '0.99% Share of Pool'. At the bottom of this section is a large pink 'Supply' button. Below the button is a disclaimer: 'By adding liquidity you'll earn 0.3% of all trades on this pair proportional to your share of the pool. Fees are added to the pool, accrue in real time and can be claimed by withdrawing your liquidity.'

A pop-up will appear very similar to this one, we will confirm it.

The screenshot shows a confirmation pop-up titled 'You will receive' with a close button (X) in the top right corner. The main content shows '54.7722' followed by a help icon and a dropdown menu showing 'NIF/ETH Pool Tokens'. Below this is a disclaimer: 'Output is estimated. If the price changes by more than 0.5% your transaction will revert.' Below the disclaimer is a table with the following data: 'NIF Deposited' with a value of '10000' and a help icon; 'ETH Deposited' with a value of '0.3' and a help icon; 'Rates' with two entries: '1 NIF = 0.00003 ETH' and '1 ETH = 33330 NIF'; and 'Share of Pool' with a value of '0.9901%'. At the bottom of the pop-up is a large pink 'Confirm Supply' button.

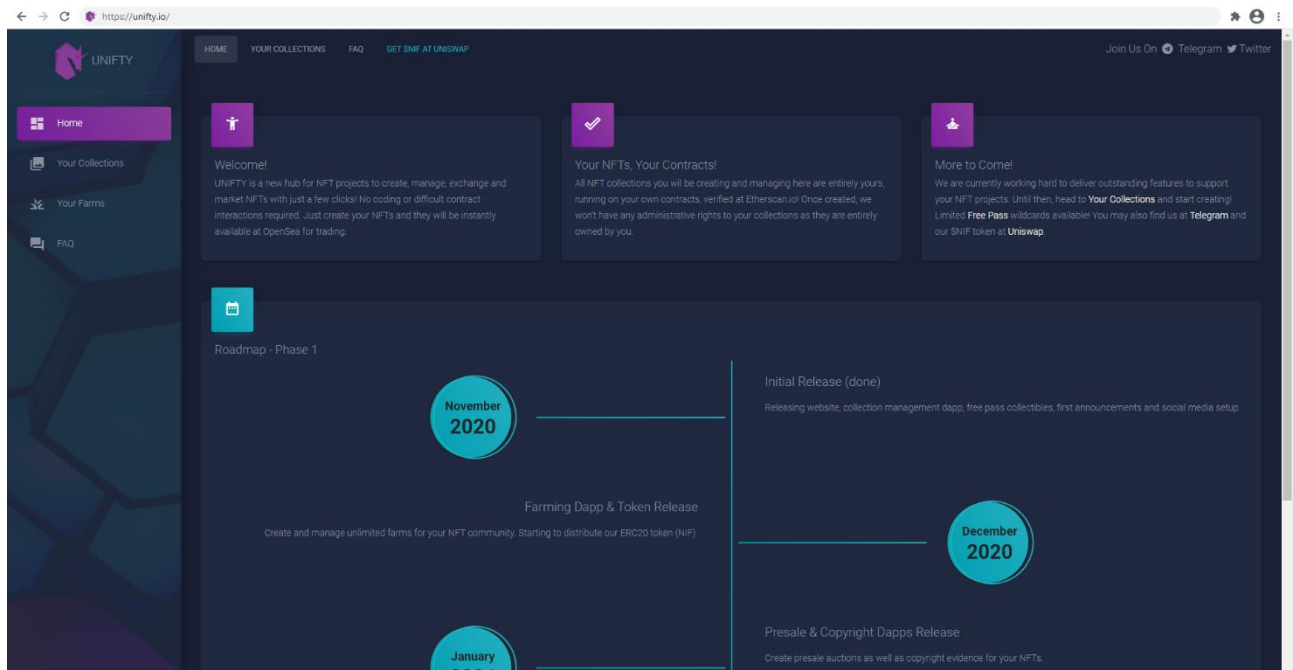

- At the top of uniswap we will click on "pool".

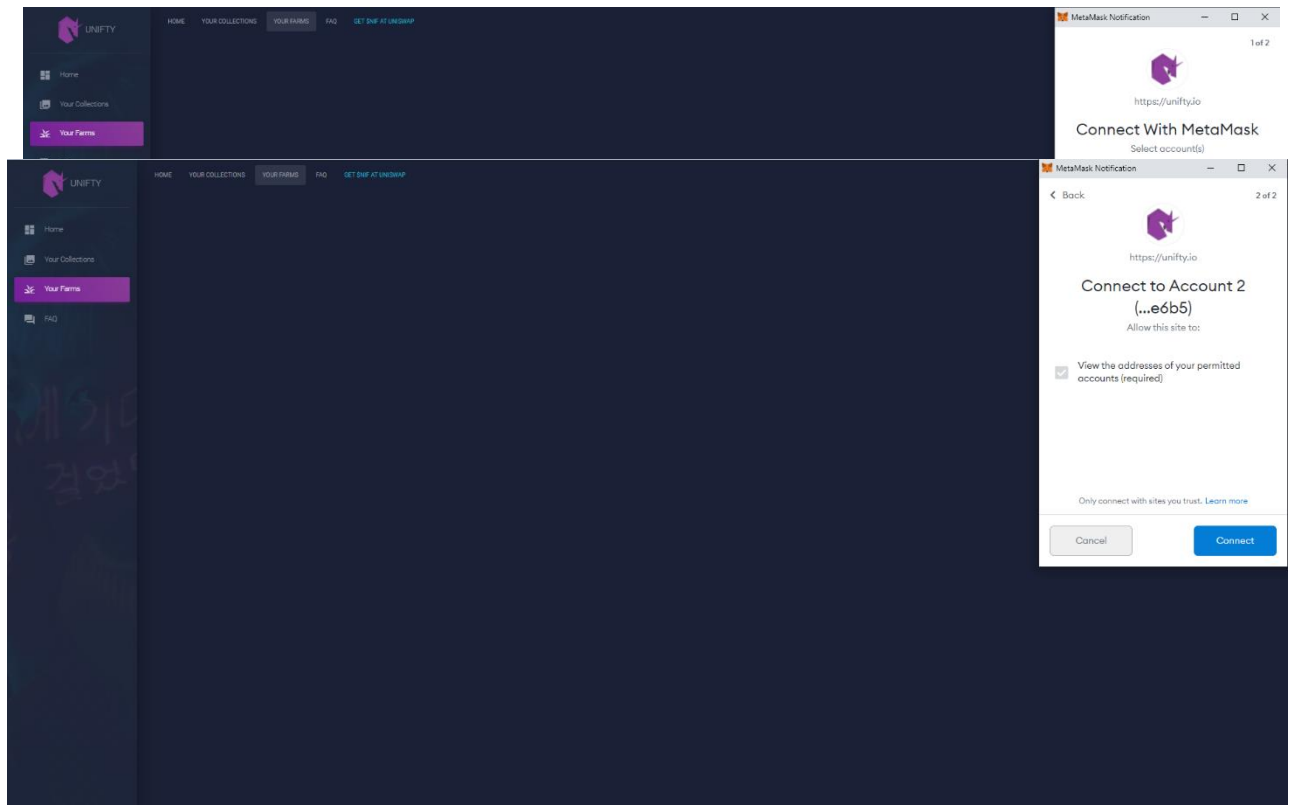

Here we look at a summary of our liquidity contribution, and we also look at the **possibility of removing the liquidity contribution.**

How to stake on NIF-LP

- Open the browser and search for unifty.io, we will see an interface shown as in the following picture, on the left side we see a section called "**Your Farms**" click on it:

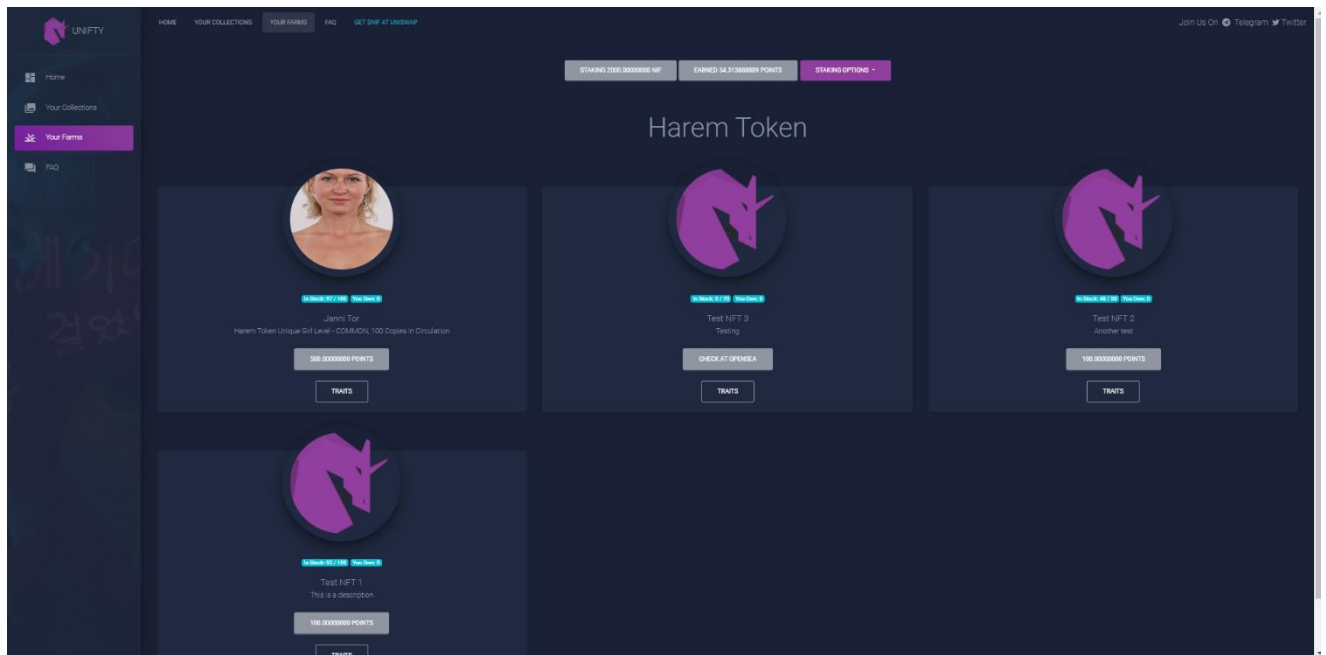

2. Once we open this option it will open a pop-up, with metamask to allow us to link our metamask information to our dapp:

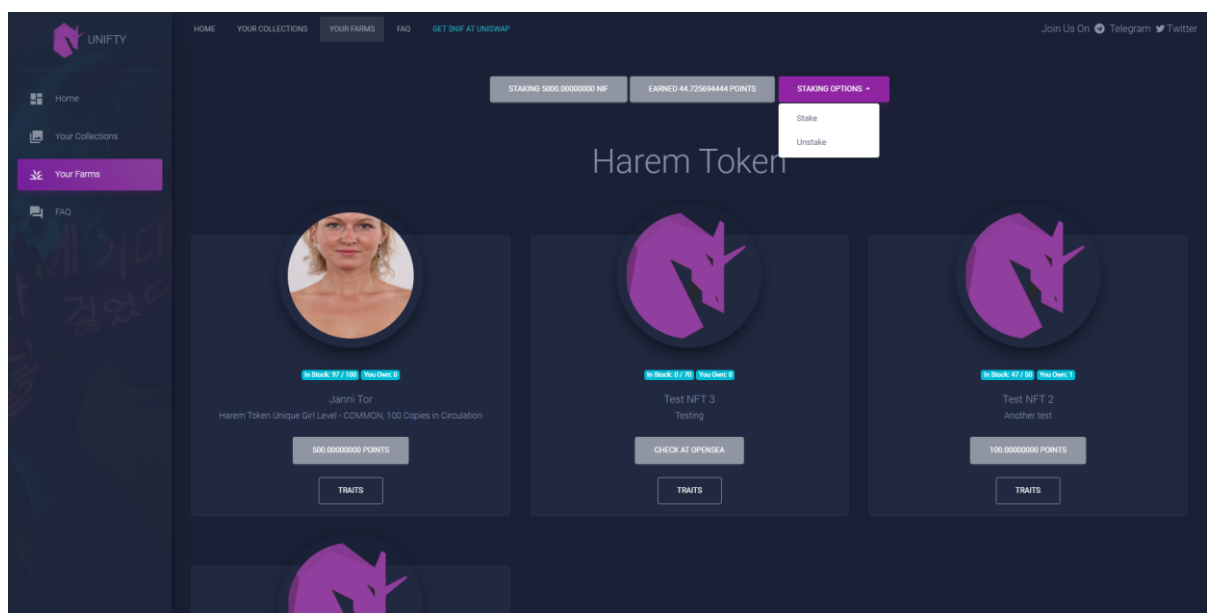

We will give you the option "next" in the next pop-up metamask will ask if we really want to allow our dapp to access your metamask account, this will be used to register on our platform and allow interaction with it, in any case we will not have access to your keys and tokens.

3. We could already say that you are in our farm platform, and there are few kids, then you will see a menu like the one shown in the next picture (the only difference will be the name "**Unifty Genesis Farm**") do not worry, as important data I would like to add that in some photos you will see the nif token for the use of farm, but finally for your interface will be NIF-LP, although who knows in the future we do not rule out the possibility of adding the same.

- At this point you will be eager to start the farm, we will see in the center of the interface an option called "staking options" click on it and we will see 2 options

Stake and unstake, to begin with we will use stake since we want to provide the **NIF-LP**.

Stake

Staking Amount

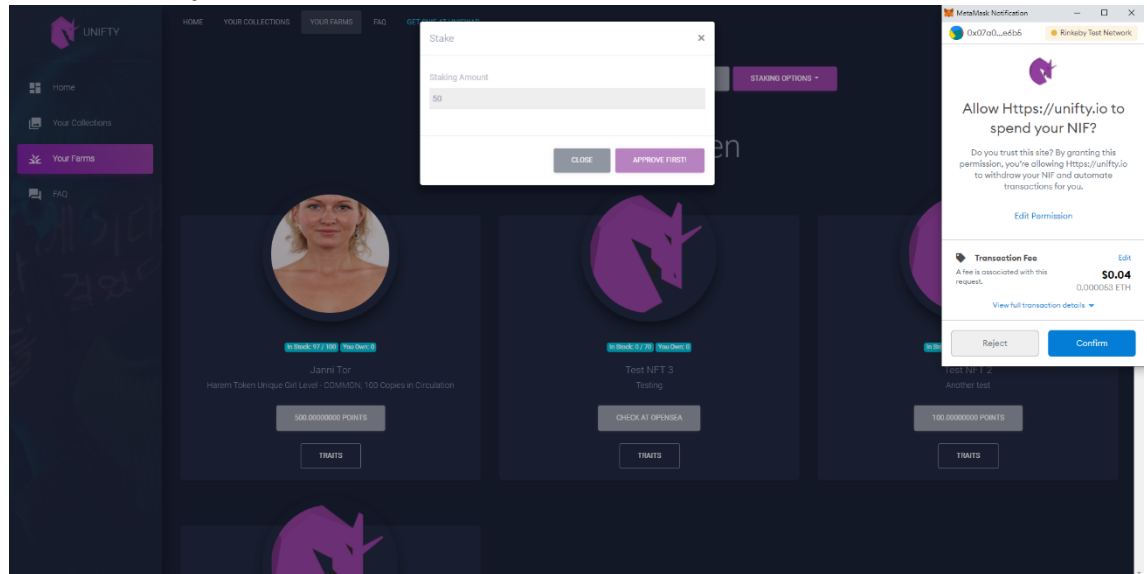

Enter the amount to stake

CLOSE STAKE!

Here we will introduce the amount of **NIF-LP**, which we are interested in providing.

I take this opportunity to comment that the maximum we can have in stake is **50 NIF-LP approx (generates 250 points per day)**, and no minimum.

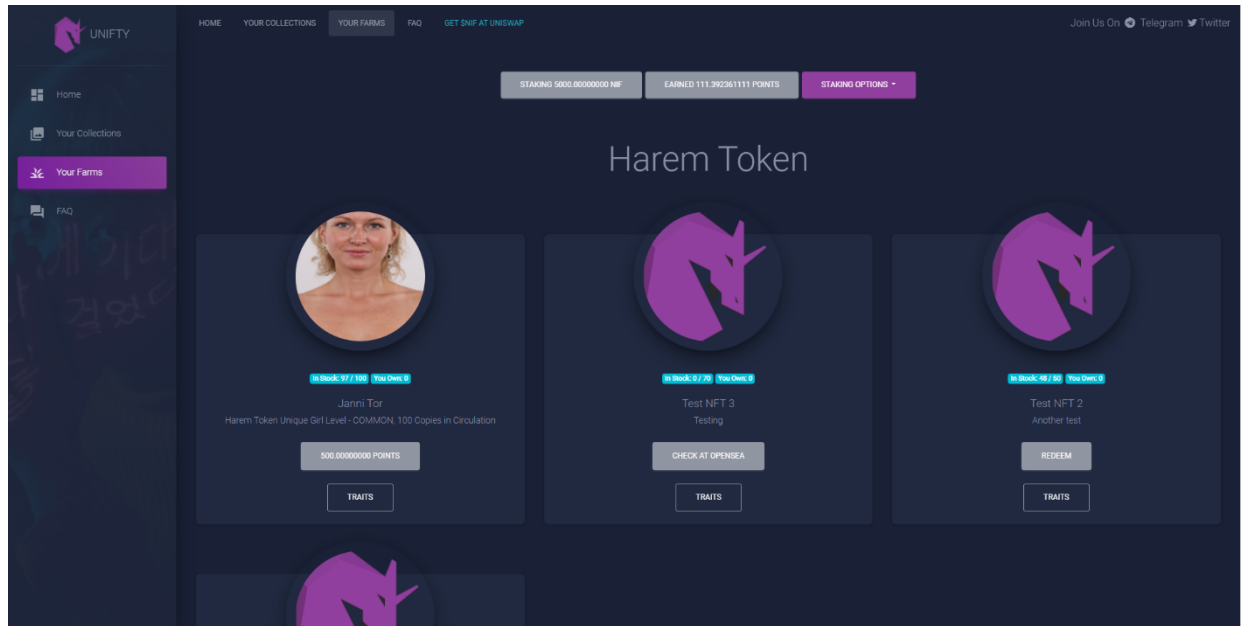

I will show you a test of 50 NIFs which is what we use now in beta:

We confirmed the metamask pop-up to accept the fee, now we wait for our dapp to receive the transaction, and refresh the page.

We will see that they will have been added to our staking balance, the staking balance makes us generate points that we will later use to acquire tokens, depending on the points we have available.

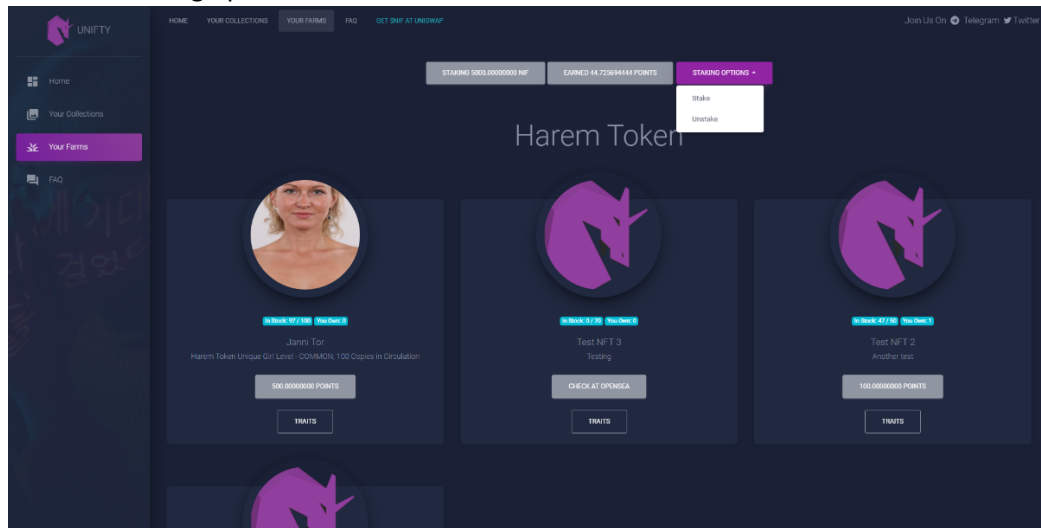

Let's imagine that we get the points to be able to claim the tokens, the menu will change and the "redeem" option will appear just like that:

By clicking on redeem we will accept the metamask pop-up, and wait for the transaction to be accepted. Y observaremos que el apartado de "Your own" se incrementa.

How to unstake NIF-LP

1. Click on "staking options":

And select the "unstake" option and type in the amount to be withdrawn.
